

# MC experience makes the difference

**Paul Marinelli brings more than 25 years of broadcasting, commentating and corporate MC experience to your next major event.**

Melbourne based international MC, voice over artist and sports commentator Paul Marinelli brings more than 25 years of broadcasting, commentating and corporate MC experience to your next major event.

Trained as a radio announcer and having worked with several Melbourne radio stations before establishing his own automotive and sports based PR company in 1995, Paul brings an easy to listen, clear and highly professional level of event presentation for the smallest to the largest corporate and media events.

Paul is a strong believer in the event being all about the company conducting it, the talented people selected to present at it and the delegates who are paying to be at the event or are valued customers or team members of the organiser. The MC is responsible for quickly establishing rapport and stringing it all together smoothly.

Paul provides a warm and professional presentation style and takes the time to research keynote and general speakers, while also seeking to interact with them beforehand to ensure concise, accurate and flattering introductions. This is also important when moderating panel discussions at conferences and conventions, ensuring that there is knowledge to draw upon to contribute questions and promote continued topical conversation, while also equally sharing panel member speaking time.

The key MC role of researching the company conducting the conference, convention or media event is also paramount to ensuring a successful overall presentation. Ensuring that conference presentation timeframes are maintained is also a major priority.

Paul's detailed radio, television and sporting event hosting experience makes interviewing company direc-

tors, conference guests or company ambassadors a key strength.

Paul Marinelli is based in Melbourne

and regularly travels locally and internationally for major conference and convention events.
